Predictive Services Discussion: A cold front will move into the northern Rockies with much cooler conditions and higher relative humidity for the northwest quarter of the U.S. Locally heavy rain is possible in Montana with this feature. Showers and thunderstorms are also expected along a frontal boundary from the upper Mississippi Valley through the Appalachian Mountains. For the central and southern Plains, hot conditions will continue under a ridge of high pressure aloft.

COMMON DENOMINATORS OF FIRE BEHAVIOR ON TRAGEDY FIRES

Weather / Fire Behavior Category

Five common denominators that contribute to accidents/incidents have been identified through studies of tragedy fires. It is important for firefighters to readily recognize the following common denominators so that future tragedies can be prevented:

- Most incidents happen on smaller fires or on isolated portions of larger fires.
- Most fires are innocent in appearance before unexpected shifts in wind direction and/or speed results in flare-ups or extreme fire behavior. In some cases, tragedies occur in the mop-up stage.
- Flare-ups generally occur in deceptively light fuels, such as grass and light brush.
- Fires run uphill surprisingly fast in chimneys, saddles, gullies, and on steep slopes.
- Some suppression tools, such as helicopters or air tankers, can adversely affect fire behavior. The blasts of air from low-flying helicopters and air tankers have been known to cause flare-ups.
